February 1, 2002

The Honorable Rick Perry, Governor
The Honorable Bill Ratliff, Lieutenant Governor
The Honorable Pete Laney, Speaker of the House of Representatives
Capitol Building
Austin, Texas 78711

Dear Gentlemen:

I am pleased to report to you on the activities of the Health Professions Council for Fiscal Year 2001, as required by the Texas Occupations Code, Chapter 101.151. The Health Professions Council continues to be a unique entity among State agencies in Texas or any other state. This report will highlight our accomplishments.

There is a growing realization that the State of Texas has created a useful vehicle in the Health Professions Council as the Council is increasingly called upon to participate in interagency workgroups and health policy initiatives. It is apparent there will continue to be increased demands and new expectations for the Health Professions Council as healthcare issues dominate the public agenda.

We believe there are many exciting possibilities for the Council in the future. We look forward to working together to develop new opportunities for continued growth in efficiency and effectiveness for the Council and to produce even greater benefit to the citizens of Texas.

Sincerely yours,

A handwritten signature in cursive script that reads "Katherine A. Thomas".

Katherine A. Thomas, M.N., R.N.
Chair

An Introduction to the Health Professions Council

What is the Health Professions Council?

The Texas Health Professions Council (HPC or Council) provides a unique solution for the multiple challenges of state regulation of health professions. The State of Texas created HPC to achieve the potentially desirable outcomes of consolidation of small independent health licensing and regulatory agencies without sacrificing the quality, independence, accessibility and accountability of individual boards. Established in 1993, the Council has a membership of 14 agencies currently representing 35 professional licensing boards or registries. Operating with a budget of \$120,132 per year, the Council employs a staff of three persons. Two administrative staff carry out administrative functions and coordinate the work of Council committees composed of staff from member agencies. A third position, added in FY99, provides network manager services for member agencies. Although agencies are required by legislative mandate to be members of HPC, participation in Council initiatives is voluntary. The Council has no authority over member agencies. The Council was cited as an innovation by the Pew Health Professions Commission in its December, 1995 report *Reforming Health Care Workforce Regulation*.

What is the value of the Council?

The Council was created in 1993 by the 73rd Legislature on the recommendation of the Texas Sunset Commission to achieve the efficiency and effectiveness goals of consolidation while avoiding the creation of a new bureaucracy. Repeated efforts to consolidate boards under one umbrella agency had received only lukewarm support while generating heated opposition from the professions. Experience in other states had shown that large umbrella agencies sometimes failed to meet the perceived benefits and desired objectives of improved consumer service and decreased costs. Problems of consolidations included increased response time for services, decreased quality of services, lack of expertise in regulated professions, and decreased disciplinary actions against licensees. Studies showed consolidations often failed to achieve economies of scale.

Although independent agencies provide advantages to consumers and licensees, there are some challenges inherent in small agencies: staff are necessarily generalists in administrative functions, staff training is costly and limited by lack of in-house resources, functions may be duplicated between agencies to some extent and there is little opportunity for scale economy.

HPC FY01 Annual Report

The Council has provided remedies through shared staff training programs and voluntary sharing of some administrative functions. Some economies of scale have been realized through shared outgoing mail processing, courier service, document reproduction center, joint participation in an employee assistance program, shared complaint line and shared information technology support. The Council also provides joint representation for HPC agencies on multi-agency work groups and policy initiatives.

The Council has mitigated problems of competition and conflict among the licensed professions by fostering an atmosphere of communication and cooperation. It has provided a forum for discussion of issues and allowed a coordinated response to legislative issues when requested by elected officials.

What does the Council do?

The Council has been successful in creating shared initiatives that save money and promote improved quality and consistency. Member agencies collocated to one state office building to facilitate resource sharing including a shared boardroom and conference rooms. The Council operates a complaint line that allows consumers to file complaints against any state-licensed health professional by calling one toll-free number. The shared complaint line improves effectiveness and efficiency by providing easy "one-stop" access for consumers and significant cost-savings for individual agencies.

Other programs promoting efficiency through shared resources include a document-processing center, outgoing mail center, joint tracking of legislative issues, courier service, shared legal libraries and training materials. The Council provides staff development training for member agencies. The Council developed manuals for board member training, risk management, and disaster recovery, as well as core policy and procedure statements on various topics to save staff time and promote consistency among members. Several members have cooperative arrangements through which one agency provides certain accounting or administrative functions for another or provides backup services in times of staff absence or transition.

The Council has also created a resource list of member agency staff that can communicate in languages other than English. Member agencies have agreed to share staff when it is needed to communicate effectively with customers.

Participation in the Council has created a new atmosphere of cooperation where member agencies can engage in cooperative rule making instead of settling issues through the administrative law system at great cost to all parties and to the taxpayer.

What are the Council's significant accomplishments?

- The Council provides joint representation for member agencies on work groups and policy initiatives eliminating the need for each agency to participate individually.
- Approximately 2,294 consumers call the toll-free complaint line each month and the number grows each year. Callers can use the voice mail function to request complaint forms from one of the HPC agencies or can transfer to the HPC office staff for assistance. An average of 524 callers per month are routed to HPC administrative staff for assistance.
- Sharing of administrative functions is breaking new ground in eliminating duplication and increasing efficiency. The outgoing mail center allows agencies to participate in cost-saving initiatives such as bar coding. The reproduction center has reduced the need for agencies to acquire larger, more expensive copiers.
- Creation of back-up systems assures that critical administrative functions can be performed by a partner agency in times of staff absence or position vacancy. HPC agencies have come to depend upon each other for such assistance.
- The sharing of a network manager for hardware and software service and assistance allows agencies to meet technology needs at a greatly reduced cost of approximately \$20 per hour versus a minimum of \$75 per hour for outside consultants.
- Risk Management cooperative efforts benefit the HPC agencies in the Hobby Building. The Council developed a risk management manual and worked with DPS Capitol Police to develop a model violence response plan.
- Use of a "purchasing pool" provides trained and certified purchasers to assist agencies too small to have such expertise.
- Informal work groups provide help to agency staff in completing major projects such as the annual financial report.
- HPC agencies have been able to provide more and better services without significant staff growth in administrative areas.
- Central coordination of "open enrollment" presentations. HPC organizes the annual event for providers to present information to HPC member agency staff. HPC also hosts periodic updates by Citistreet.

Who benefits from HPC?

Employees benefit through increased training opportunities, access to employee assistance programs, and opportunities to refine job skills as administrative sharing allows greater staff specialization. The Council network provides opportunities for communication, shared expertise and joint problem-solving, reducing stress and improving performance. Other state agencies benefit from HPC's board member training manual and meeting rooms. The Council has become a leadership focus for all smaller state agencies. HPC increasingly receives requests to aid non-member small agencies that lack such support systems.

Licensees benefit from retention of independent boards, which are more responsive and accessible to licensees, and from increased efficiency of the agencies. As more administrative tasks are shared, staff with specific expertise are more available to respond to needs of licensees and consumers.

The one-stop complaint line directly benefits consumers who can place one toll-free call to obtain information or initiate a complaint against any licensed health professional. Many consumers lack information necessary to determine which board to go to with their complaint. The greatest benefit to consumers is preservation of independent boards with specific expertise in investigation and resolution of consumer problems. Consumers and taxpayers benefit indirectly from improved efficiency and from cooperation among agencies, which produces cooperative rulemaking and less reliance on the administrative law system to resolve conflicts.

How is the Council funded?

The Council is funded entirely by transfer of funds from member agencies. A rider in the biennial appropriations bill specifies prorated amounts. Additional amounts are transferred by member agencies to pay for shared services such as technology support and toll-free phone service on a usage basis. A report of financial support by member agencies is provided on page 16 this report.

FY 01 Initiatives

With many mandated tasks completed and ongoing cooperative programs working smoothly, the major initiatives for the Health Professions Council in FY 01 focused on technology issues, policy issues, and the study of the complaint policy mandated by H.B. 2408.

Study of Complaint Procedures

The 77th Legislature passed H.B. 2408 requiring the Health Professions Council to study the complaint procedures of member agencies. The bill specifically mandated that HPC study: 1) the process by which complaint information is compiled and handled; 2) the process by which complaints are adjudicated and resolved; and, 3) the extent to which complaint information is made available to the public. The bill further required HPC to prepare a report on the study to include any recommendations for: 1) a standard procedure for the handling of complaints by the entities studied under the Act; and, 2) a method that provides the most complete public access to complaint information.

The Council assigned a committee of staff representing all of the member agencies. To date, the committee has developed and disseminated a survey instrument to gather data on the each agency/board's complaint process. The data has been collected and the committee is in the process of analyzing the data for proposed recommendations. The Council is required to submit a report to the Lieutenant Governor and the Speaker of the House by January 1, 2003.

Technology Issues

Technology issues have been a high priority for the Council since FY 99. While technology advancements create new opportunities, they also present great challenges for agencies. Cooperative technology efforts have allowed agencies to share both services and knowledge. Smaller state agencies have the particular problem of not having the resources to hire experienced information services support staff.

IT Network Support

At the beginning of FY 99, HPC received approval from the Legislative Budget Board and the Office of the Governor for an additional FTE to provide information technology support for

member agencies in the Hobby Building. HPC had previously contracted with the General Services Commission (GSC) for one-half of an FTE, but GSC terminated that arrangement at the beginning of FY 99. Outside consulting was not a practical solution for smaller agencies that lacked the technology expertise for even minor troubleshooting. The hiring of a Network Manager has proven very beneficial and cost effective for the agencies that share costs based on projected use of the services. The cost for the HPC staff position is approximately \$20 per hour compared to fees for outside consultants that generally exceed \$75 per hour. It has been valuable for the agencies to have an individual staff member who has historical knowledge to the network and of the various agencies' systems.

Licensing and Enforcement Database Systems

Many of the HPC agencies face common problems with outdated licensing and enforcement database systems. When a new system proposed for state licensing agencies in the previous biennium proved unworkable, agencies faced growing problems with no immediate solutions. HPC agencies joined with other licensing agencies to identify common issues and to work with the Department of Information Resources (DIR) to address them. Although some of the larger licensing agencies have developed their own licensing and enforcement database systems, most of the smaller agencies are in need of the licensing database from DIR. One of the recommendations from the Statewide Health Coordinating Council (SHCC) is that the licensing and enforcement database system being considered by DIR include the ability to collect and report data about health care providers (see Texas State Health Plan 1999-2004 Plan Update 2001-2002).

E-Commerce

An HPC task force previously studied agency license renewal processes to determine whether any cooperation or consolidation of systems would be feasible or efficient. It was agreed that any consolidation of current systems would produce no gains in efficiency that exceed the benefits lost. It was determined that HPC should look toward achieving efficiencies in the future through technologically advanced systems such as on-line verifications and renewals or 1-900 telephone renewals. Many agencies are already providing on-line verifications and some plan to provide on-line renewals as early as the end of fiscal year 2001. Some smaller agencies may need assistance as they lack the technological capabilities and financial resources to achieve the aspects of E-commerce.

The Texas Department of Health Professional Licensing and Certification Division has been engaged in a pilot project using 1-900 telephone renewals and has reported regularly to HPC

on the progress of this trial. To date the 1-900 telephone/credit card renewal process has had limited success. Because of the relatively low use by licensees, the process may not be cost effective for the vendor. Based on experience with this process, it appears that HPC agencies should focus on an on-line renewal process.

Document Imaging

The 76th Legislature provided for the acquisition of an electronic imaging system for archiving documents to be funded and shared by ten of the HPC agencies. The project is in partnership with the Texas State Board of Medical Examiners. A committee researched the agency needs, acquired technology information, put out a request for offer (RFO), selected a vendor, and purchased a system. The contract was awarded to BCS Systems, Inc. The system is located on the first floor of the Hobby in shared space. The 77th Legislature provided funding for the ongoing costs of the imaging system, which include ongoing port and connection costs, hardware and software supports, consumables, and hardware/software upgrades. The 77th Legislature also provided funds for a part time System Administrator. This has proved beneficial to the member agencies by providing a person to follow up with system "bugs," hardware and software failures, etc. Currently all Hobby Building HPC member agencies have access to the system to store and retrieve archived documents. Over time, the goal is to utilize this system for storage/retrieval of licensee files.

Interagency Workgroups and Policy Initiatives

The Council has taken an active role in a number of interagency workgroups during this year and is increasingly seen as a vehicle for communication and a source of information and leadership for interagency initiatives that encompass HPC member agencies.

- Small State Agency Task Force: HPC agencies are members of the Small State Agency Task Force (SSATF), which is composed of agencies with 100 or fewer FTEs. HPC provides meeting facilities and administrative support to SSATF and employees of HPC member agencies are actively involved in task force initiatives and leadership. The required EEO Training for new employees, which was offered jointly for HPC agencies by the Administrative Director of the Board of Nurse Examiners, was opened to all small state agencies. HPC also shares collaborative work it produces for member agencies with the SSATF when other small state agencies might benefit from the work it produces. For example, HPC recently shared a model for Contract Workforce Policies.

HPC FY01 Annual Report

- In the past, HPC has been active in several initiatives of the Statewide Health Coordinating Council's (SHCC) State Health Plan. HPC representatives were active members of SHCC's Health Personnel Data Advisory Committee and the Consumer Information Task Force. The Data Advisory Committee has required ongoing participation and feedback from HPC staff and all the member agencies as it worked on proposals for development of a minimum data set of licensee information. (For additional information see page 10, The Texas State Health Plan Update.) This past year, the SHCC has developed a "white paper" to highlight issues surrounding Telemedicine and Telehealth. The white paper is to be the beginning for a planning effort to produce a statewide Telemedicine Telehealth plan. HPC staff and staff from member agencies participated in the workgroup on licensing and scope of practice issues. A survey was completed by member agencies to display the status of regulation of services delivered via electronic media.
- Medical Records Privacy Workgroup: With the passage of SB 11, the Attorney General's office has established a workgroup to address the implementation of the Texas State Medical Records Privacy Law. The Council has reviewed the requirements of this bill and assigned staff from member agencies to participate in this workgroup. Through this representation and feedback, member agencies will meet the requirements of the law.
- The Health Professions Council, through member staff, is providing representation and participation in the United States Department of Justice Southern District of Texas' Health Care Fraud Working Group. The Justice Department is seeking to establish effective communication with the health professions licensing boards to assist in identifying health care fraud.
- The Health Professions Council was asked to participate as a member of the State Agency Advisory Council of the East Texas Rural Access Project (ETRAP). Funded through the Robert Wood Johnson Foundation Southern Rural Access Program, ETRAP seeks to improve access to health care for persons in underserved rural communities throughout the East Texas region.

Providing National Programs Locally

The Council has continued efforts to bring national programs to Texas to decrease travel costs and provide maximum participation by Texans in national forums. An HPC member agency, the Department of Health's Professional Licensing and Certification Division, hosts the National Certified Investigator/Inspector Training (NCIT) program of the Council on Licensure, Enforcement, and Regulation (CLEAR) locally approximately once a year, providing the highest quality training at the lowest possible cost for HPC members and other state agencies employing investigators. The last session was held in San Antonio, September 13-15, 2001. The Texas Department of Health's Professional Licensing and Certification Division, along with the Health Professions Council sponsored the annual CLEAR Conference. The conference was held January 10-12, 2002 in San Antonio, Texas.

Future Challenges

It is clear that there is a growing realization that the State of Texas has created a useful vehicle in the Health Professions Council and there will continue to be increased demands and new expectations from within and outside the Council. The Council is increasingly called upon to participate in workgroups and health policy initiatives some of which require travel.

The study of complaint procedures required by H.B. 2408 will be one of HPC's leading priorities. The committee and the Council will focus on accurately displaying the data, analyzing the data, reporting on the findings, and developing recommendations for standardizing the complaint procedure where it is feasible and a method that provides the most complete public access to complaint information.

Another priority for the Health Professions Council will be the ongoing maintenance of the electronic document imaging system. The 77th Legislature provided funds to cover ongoing costs of the system; and, with anticipated increased usage of the system, it will be important to continue that support. The use of a shared position to administer the system has proved to be a valuable asset to the ongoing success of the system. In a relatively short period of time, the part time system administrator has assisted agencies to utilize the system, identified system "bugs" and tracked down solutions, and has utilized warranties and service agreements to increase the efficiency of the system and protect the state's investment.

Telephone calls to the Council's Toll Free Complaint Line continued to occur at a high rate (approximately 2,300 calls per month) during the last fiscal year resulting in additional work for HPC and agency staff. Requests for use of HPC meeting space continue at a high rate,

HPC FY01 Annual Report

especially requests from agencies outside of HPC. As HPC space becomes less available, agencies, both within and outside of HPC, may bear additional costs for space rental. In a recent planning session for the East Texas Rural Access Program (ETRAP), the leadership expressed an interest in the collection of the Minimum Data Set (information on health professionals), which is a part of the Texas State Health Plan. ETRAP's ongoing planning efforts may involve some increased demands on HPC staff time.

These are only a few of the increasing demands placed on the Health Professions Council. In view of HPC's limited resources, prioritization of demands will be a challenge as the Council seeks to meet growing expectations while minimizing additional costs to member agencies and their licensees.

Recommendations for Statutory Changes To Improve Regulation of Health Care Professions

Collocation of the members of the Health Professions Council

In 1998, the 76th Legislature codified HPC's Act from the Texas Revised Civil Statutes, Article 4512p, to the Occupations Code, Chapter 101. In Article 4512p, the Council was directed to "adopt a memorandum of understanding with the General Services Commission to develop and implement a plan to collocate the staffs of the boards listed by Section 1(b) of this article, except that the memorandum shall provide for a study of the feasibility of relocating the health licensing boards of the Texas Department of Health with the collocated staffs." When the statute was written for inclusion in the new Occupations Code, the reference to collocation was deleted because that had been accomplished. The feasibility study determined that it was not feasible to collocate the health licensing division of the Texas Department of Health. The Council recommends that the Chapter 101 of the Occupations Code be amended to include the **continued** collocation of member agencies of HPC (with the exception of the health licensing division of Texas Department of Health).

The Texas State Health Plan 1999-2004 (2001-2002 Update)

The Statewide Health Coordinating Council's 2001-2002 Texas State Health Plan Update recommends (in the Goals, Objectives and Strategies in Strategy 1.1.1, action 3) that the licensing boards for those professions named should change their licensing forms and data systems to include the collection of the minimum data set on an annual or biennial basis. The recommendation also states that the Legislature should appropriate funds to the Texas Department of Health to cover the costs of contracting with licensing boards to implement the minimum data set (MDS). In addition, the recommendation states that the Legislature should raise the FTE cap for those licensing boards and the Health Professions Resource Center, which will be required to implement and maintain the collection of that data.

HPC participated with SHCC to determine the most efficient and effective means of obtaining the needed information. During the past two years, HPC and the member agencies have invested many staff hours in determining the costs, obstacles and possible alternatives for the database. SHCC has reduced the number of data elements in the MDS in an effort to make

collection of the desired data less costly. While it is possible to implement the MDS proposals, it will require a great commitment of state resources.

The following issues were resolved by working with SHCC. It is important to HPC agencies that the recommendations are implemented as recommended by SHCC and as stated below:

- **MDS data elements non-mandatory:** SHCC recommends that the reporting of health personnel data is non-mandatory for health professionals, except for those data elements required for board administrative and regulatory purposes. It would be especially difficult and costly to implement the MDS if licensees must provide all of the data elements as a condition of licensure. Making data elements, which, are not required for board administrative and regulatory purposes, mandatory would require follow-up by agency staff for incomplete data and enforcement action for failure to comply.
- **Funding for the MDS:** SHCC recommends that the funding for the MDS come from appropriation to the Texas Department of Health who would contract with agencies to implement the MDS. This is important to HPC member agencies that do not currently have the resources to implement the MDS. It is important to licensees that funding for this initiative come from another source, rather than from increased fees. Factors which impact the cost for the MDS include:
 - **Agency Databases:** While some of the licensing boards can easily accommodate the addition of new data elements, most of the smaller boards have outdated databases that are already overly stressed. The resolution of this problem may depend upon the outcome of the licensing database systems being considered by DIR.
 - **Staff Resources:** Licensing agencies have minimal staff and budget resources and are strained to fulfill current legislative mandates. None of the agencies have sufficient staff or funding to perform additional tasks, especially an initiative of this magnitude. Although SHCC has expressed commitment to support agencies in obtaining sufficient resources, HPC agencies are cognizant of the legislative efforts to control the size of the state workforce and expenditures and the resulting impact on new initiatives.

- **Social Security Number Confidentiality:** HB 692 (76R) by Representative Janek, states “the social security number of an applicant for or holder of a license to practice medicine that is provided to the board is confidential and is not subject to disclosure under the open records law.” While the legislation provided much needed protection to licensees, it has created barriers for state agencies and educational institutions that need to track licensee data. It’s been recommended by the Statewide Health Coordinating Council (SHCC) that “the Legislature should amend H.B. 692 to allow for the disclosure of the social security number and other licensing board data including, but not limited to, gender, date of birth, and race/ethnicity to the Health Professions Resource Center, other state agencies and state universities. Release of such licensing data should be subject to any confidentiality requirements and guidelines outlined by the open records laws and privacy laws of Texas.” The Council supports the SHCC recommendation.

Other issues surrounding the implementation of minimum data set (MDS) that could affect HPC member agencies:

- **Lock Box System Requirements:** Five of the boards use the Comptroller’s Lock Box to process license renewals. The lock box system allows the agencies to meet the state’s three-day deposit requirement and it generates considerable additional state revenue by assuring immediate deposit of funds to the state treasury. The Comptroller has set exact requirements for items it will process including limits on paper size. Collection of MDS information within the licensing renewal process will require the support of the Comptroller in changing current lock box regulations. If agencies must withdraw from the lock box system, they would require additional staff to perform the work that is now done by Comptroller staff.
- **Loss of Reappropriated Funds:** Currently the Comptroller’s Revenue Estimates for licensing agencies include “reappropriated funds” which are generated by fees for the provision of licensee information. Any distribution of licensee information by the Health Professions Resource Center or other entities could result in decreased revenue for licensing boards.
- **Race/Ethnicity Data:** Due to potential liability, agencies are reluctant to collect sensitive information that they do not need. An agreement to make provision of this information optional for the individual licensee should resolve this problem.

Many of these issues could be resolved if the project were entirely funded through an appropriation to SHCC. HPC has discussed with SHCC the possibility of SHCC contracting with the agencies to provide the data at their costs, including cost for both personnel and

database revisions. This could resolve some of the issues surrounding individual agency budgets and contingent revenue riders. However, it would not solve the problem of agencies lacking sufficient staff under the FTE cap. Nor would it address the costs and problems associated with enforcement of a mandatory MDS.

The HPC's member agencies support the collection of the minimum data set, stressing the importance of funding coming from the Legislature to the Texas Department of Health, rather than from raising the fees of its licensees.

Health and Human Services Commission recommendation to include the mental health boards of the Texas Department of Health as individual members of the Health Professions Council

In December, 2000, the Texas Health and Human Services Commission released its Report on Texas Department of Health Regulatory Programs with their recommendations for consolidating, restructuring, or moving health-related regulatory programs. Recommendations 9 and 10 involved clustering the mental health boards (Texas State Board of Marriage and Family Therapists, Texas State Board of Examiners of Professional Counselors, Texas State Board of Social Worker Examiners, and the Interagency Council on Sex Offender Treatment) and attaching them to HPC as separate boards each with their own vote. The Council recognizes that the mission of these four boards is appropriately aligned with the missions of members of HPC. If the legislature chooses to remove these boards from the Texas Department of Health and cluster the boards into a new single state agency, it would be appropriate for that **agency** to become a member of the Council, with a single vote. Agencies, not boards are represented on the Council in most cases. The Texas State Board of Medical Examiners, for example, has three independent boards and participates as a single member agency. It should be noted, however, that collocation is an essential element in member agencies realizing the full benefit of membership in the Health Professions Council. The four mental health boards are currently represented on the Council through the Texas Department of Health, but they feel that their representation is diluted by the fact that the Department of Health represents seventeen independent boards on the Council.

Recommendations for Statutory Changes With Fiscal Implications to HPC Agencies

Rider Provisions

Contingent Escalation of Licensing Fees

The current “contingent revenue rider” funding structure requires that any increase in appropriations to licensing boards be covered by new revenue. The Comptroller does not count revenue generated by an increase in the number of licensees as new revenue. With additional licensees, the agency must accomplish greater work with the same number of employees and cannot provide the same level of service. The only way an agency is credited with increasing revenue is to increase fees paid by licensees.

Also, there are currently a number of major initiatives under consideration that have the potential to produce large increases in the fees if the current “contingent revenue” riders are maintained. Some of the initiatives are directly related and of benefit to the licensed professionals, but others have only limited or no benefit to the individual licensee who will bear the costs. As previously noted, the adoption of the SHCC Minimum Data Set has the potential to create additional costs to licensees, if executed and funded through the licensing boards. Other programs with the potential to impact licensee costs include the following:

- **New Licensing and Enforcement Databases:** While the outcome of the current DIR study of licensing and enforcement databases is not yet known, it is reasonable to assume that most of the HPC agencies will need to purchase and implement new licensing and enforcement systems in the near future. There is no way to estimate the cost at this time.
- **E-Commerce:** While on-line licensing should be more efficient and less costly in the future, there may be heavy costs during the implementation period.
- **Professional Profiles:** The Board of Medical Examiners is currently implementing a physician profile program and other licensing boards have submitted cost estimates to implement similar programs in the future.
- **Healthcare Integrity and Protection Databank:** The reporting of final actions against licensees to the federal database has placed additional demands upon agency staff. While no direct costs can be identified, the potential need for additional staff grows as agencies are required to meet new external demands.

**Health Professions Council
Administrative Office Budget**

	2001 Expended
Salaries	\$ 115,700
Other Personnel Costs	\$ 3,085
Other Operating Costs	\$ 20,332
Capital Expenditures	\$ 0
TOTAL	\$ 139,117
Board of Chiropractic Examiners	\$ 2,845
Board of Dental Examiners	\$ 8,613
Board of Medical Examiners	\$ 1,430
Board of Nurse Examiners	\$ 14,344
Executive Council of Occupational Therapy and Physical Therapy Examiners	\$ 5,317
Texas Optometry Board	\$ 5,512
Board of Pharmacy	\$ 24,363
Board of Podiatric Medical Examiners	\$ 1,920
Texas Department of Health: Professional Licensing and Certification Division	\$ 11,904
Board of Examiners of Psychologists	\$ 7,135
Board of Veterinary Medical Examiners	\$ 6,871
Board of Vocational Nurse Examiners	\$ 9,968
TOTAL MEMBER AGENCY TRANSFERS	\$ 120,132
